

RESEARCH TALK / SEMINAR

Your next scientific talk

A concise statement of your question and contribution.

Your name · Collaborators

Institution / Research group · Conference / Date

RESEARCH GROUP / PROJECT

The central result

Give the audience a concise guide to your evidence.

01 State the main observation

Describe the evidence in one or two short sentences.

02 Explain what changed

Connect the result to a model, method or baseline.

03 Make the implication clear

Tell the audience why this finding matters.

KEY TAKEAWAY

One sentence
your audience
should remember.

The equation behind the result

Introduce the relation, then explain its physical meaning.

ENERGY-MOMENTUM RELATION

$$E^2 = p^2 c^2 + m^2 c^4$$

NOTATION

E: energy · p: momentum
m: rest mass · c: speed of light

PHYSICAL MEANING

Energy combines motion and rest mass.
At zero momentum, it reduces to $E = mc^2$.

Compare the evidence

Use the same axes and scale so the difference is easy to see.

FIGURE A

Add your plot or diagram here

A / Baseline or reference

Describe the condition and the key observation.

FIGURE B

Add your plot or diagram here

B / Your result or alternative

Describe the condition and the key observation.
